

H160 The first of the next generation

Multimission

Designed to be the customer's choice for decades to come. Offering unparalleled innovation with 68 patents making missions possible, now and for the future. The H160's versatility and range ensures it is ready for the toughest missions.

Transport

Safran Arrano engines reduce fuel consumption by 15%.

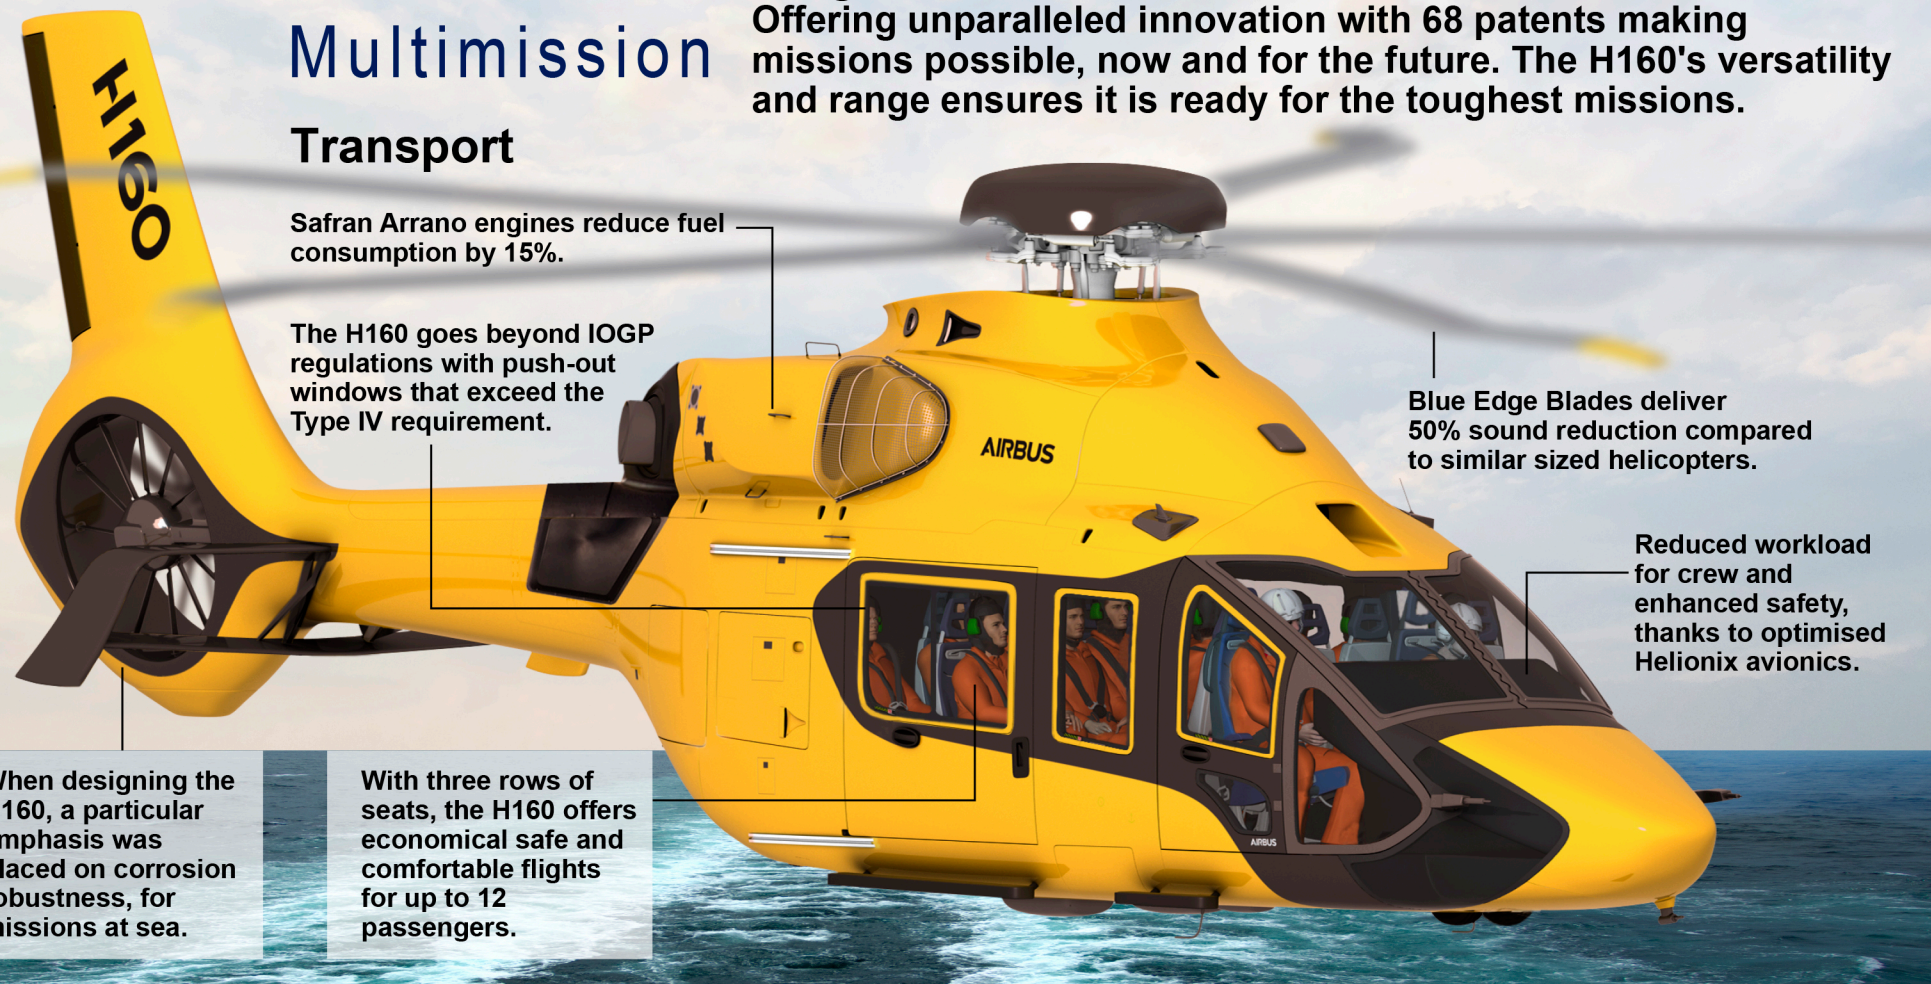

The H160 goes beyond IOGP regulations with push-out windows that exceed the Type IV requirement.

Blue Edge Blades deliver 50% sound reduction compared to similar sized helicopters.

Reduced workload for crew and enhanced safety, thanks to optimised Helionix avionics.

When designing the H160, a particular emphasis was placed on corrosion robustness, for missions at sea.

With three rows of seats, the H160 offers economical safe and comfortable flights for up to 12 passengers.

Search and Rescue

The unrivalled nose-up attitude in hover flight phase and four-axis autopilot means the H160 is optimised to perform the most demanding search and rescue missions.

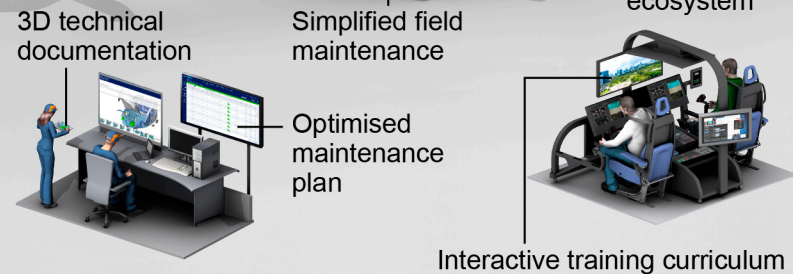

Law Enforcement

The H160 can carry a comprehensive set of tailored mission systems while still being able to deploy members of tactical units.

Maintenance and optimised support concept for increased availability

Private and Business Aviation

In addition to its class-leading combination of range, speed and reliability the ACH160 offers the choice of eight high class cabins, each offering effortless elegance unparalleled comfort, privacy, luxury and freedom.

The ACH160 version of Airbus' H160 helicopter can transport up to 10 passengers with a maximum endurance of 4 hours and 30 minutes.

Emergency Medical Services

The less than two minute automatic start-up sequence and 150 kts speed cruise means the H160 gets there faster when every second counts. With the largest cabin its class, it can accommodate all necessary medical equipment.
