

Press Release

Corsair becomes the first airline in France to adopt Skywise Mission+ FLIGHT

Toulouse, France, 4 June 2026 - Corsair is flying with [Mission+ FLIGHT](#), marking a new step in its digital transformation journey.

By connecting the solution to the aircraft's FOMAX (Flight Operations and Maintenance Exchanger) Aircraft Interface Device (AID) from Airbus, the airline is streamlining pilot workflows and enabling faster, more reliable operations.

A strong, long-term collaboration

Corsair has been a trusted Airbus customer since the late 1990s, beginning with the A330-200 and recently modernising its fleet with the A330neo.

Its digital journey with Skywise began in 2019 with the adoption of N-Flight Planning (N-FP). Today, this collaboration enters a new phase with Mission+ FLIGHT, reinforcing a long-standing relationship built on innovation and operational excellence.

Expanding the digital footprint in Europe

Corsair joins a growing group of leading European airlines, including TAP Air Portugal and KM Malta Airlines, that rely on Mission+ FLIGHT to enhance their Electronic Flight Bag capabilities.

As the first French operator to implement this configuration, Corsair is setting a new benchmark for digitalised flight operations in the region.

Why Corsair selected Mission+ FLIGHT

Corsair's objective was clear: simplify and secure the pilot workflow, particularly during the flight briefing activities.

Mission+ FLIGHT addresses this by reducing manual inputs, minimising the risk of errors, and enabling seamless data exchange between onboard applications. Through FOMAX AID connectivity, the solution allows crews to fully leverage aircraft data for enhanced use cases on their Airbus fleet.

During the in-flight stage, flight crew can complete flight follow up with the NavLog function (AID capable), and at the post-flight stage, flight crew can send the reports they have completed during flight to the ground dispatchers.

"By becoming the first French operator to implement this configuration, Corsair is setting a new benchmark for digitalised flight operations in the region. This milestone demonstrates Corsair's commitment to leveraging cutting-edge technology to drive operational excellence," said Marc Lemeilleur, CEO of Skywise.

"We are proud to drive innovation in the cockpit environment with Mission+ FLIGHT. Real-time digital information for flight management is a key enabler of enhanced flight safety and operational efficiency. Through digitalization, we empower our pilots to manage each flight more effectively with comprehensive and reliable information," said Enea Fracassi, Chief Operating Officer at

Corsair.

About Skywise

Skywise is a leading digital services company, wholly owned by Airbus. We deliver a first-of-its-kind offer that seamlessly integrates Planning & Operations Control, Flight, Technical, and Ground Operations. By providing interoperable digital solutions for end-to-end operations, Skywise combines aircraft manufacturer expertise and digital know-how to transform operational complexity into predictable and profitable performance, ensuring resilient and more sustainable operations.

Headquartered in Toulouse, France, Skywise employs around 750 people spread across the world, with offices in Canada, China, France, India, Poland, Singapore, Thailand, UK, and USA, along with representatives in several other countries across the globe. Discover Skywise's solutions here: www.skywise.com.

About Corsair

Corsair is a French scheduled airline specializing in long-haul flights. It serves the French Caribbean (Guadeloupe, Martinique, Saint Barthélemy), the Indian Ocean region (Réunion Island, Mayotte, Mauritius, Madagascar), and West Africa (Ivory Coast, Benin, Mali), departing from Paris-Orly and several regional French cities (Toulouse, Lyon, Marseille, Bordeaux, and Nantes).

Corsair operates a fleet composed exclusively of Airbus A330neo aircraft, one of the youngest fleets in the world, and offers a modern three-class service. Committed to upgrading its services and pursuing a decarbonization strategy, Corsair places customer experience quality and environmental performance at the heart of its strategy.
